FOR IMMEDIATE RELEASE

November 16, 2011

Total Computer Forms Strategic Alliance with Fujitsu to Target the Public Safety Market Globally

MELVILLE, NY, November 16, 2011: In an effort to target the Public Safety Market globally, Total Computer has formed a strategic alliance with [Fujitsu](#). This alliance will allow both companies to drive new growth and ultimately transform the future of public safety worldwide. Central to the alliance's vision is to offer a public safety solution that improves information sharing, makes data available in real time, and achieves unprecedented levels of efficiency both in mobile environments as well as on premise. Total Computer's flagship product, Total Enforcement® (TE), is that solution and has the competitive edge of being a true Windows Azure Cloud-based solution.

As a system integrator for Total Computer's TE solution, Fujitsu offers clients a full range of implementation services including project management, integration services, testing, data migration, and training. By combining Fujitsu's world-class background in IT services with TE, a state-of-the-art public safety software solution, the alliance will accelerate the availability of critical intelligence information and will ultimately increase public safety overall using breakthrough innovation.

With an overwhelming amount of upcoming opportunities in the European Union, Total Computer and Fujitsu have taken immediate steps to form strategies unprecedented in the industry. This collaboration launched with Fujitsu's visit to Total Computer's headquarters in Melville, NY the week of November 7, 2011.

With the support of Fujitsu as well Microsoft, a long-time partner, supporter and advocate of TE, Total Computer is well positioned for the future. As the only RMS/CAD solution truly running on the Windows Azure Cloud, TE represents the future of proactive, intelligence-led policing.
